VALLEY BANK

PROFILE SUMMARY

VALLEY BANK - MORRISTOWN, NJ PROJECT PROFILE SUMMARY

CTCI led the comprehensive AV installation and Low Voltage cabling for the flagship headquarters of Valley Bank in Morristown, a sprawling six-floor new-build construction also featuring a retail space.

Our expertise was applied in developing the primary MDF and an auxiliary IDF for each level. A fiber backbone riser cable was established for seamless communication between MDF and IDFs. Over 400,000 feet of premium CommScope Cat6 cable was utilized for this operation.

The project highlights include a dynamic video wall at the main entrance, situated behind the security desk. Our optimized solutions were implemented across 17 Huddle Rooms, 5 Medium Conference Rooms, and 6 Large Conference rooms, which came equipped with advanced Poly solutions and high-quality Sony and Samsung displays.

Furthermore, we outfitted a training room with state-of-the-art Samsung displays, Biamp DSP, Poly Codec, and Extron control system. A versatile Boardroom / MPR / Work Café was also created, featuring Samsung displays, Biamp DSP, Shure Microphones, Poly Codecs, Extron NAV Video routing, and Extron control system. The project was completed with Poly room schedulers for efficient space management.
