# Enterprise Solutions

Simple – Scalable – Secure

Crestron Enterprise room solutions optimize workflow and resource management, so people work smarter and more efficiently. Crestron is the only single platform that enables you to easily do whatever you want – call, present, collaborate - in all your spaces, and manage them securely on the network.

Cloud Provisioning • Network Monitoring • Room Scheduling • Device and Space Utilization Reporting

## Meeting Spaces

Get groups connected and collaborating instantly with the most powerful, scalable and affordable tabletop meeting solution.

## Free Form Spaces

Strategically add digital and wireless capabilities to lobbies, lounges and other public spaces to turn them into dynamic meeting hubs.

## Conference Spaces

Empower larger meetings with state-of-the-art dual-display presentation, video conferencing, and extended collaboration – all without any programming.

# Enterprise Audio

With open spaces, glass walls, metallic surfaces, and high ceilings trending in modern building designs, it's increasingly difficult to properly tune rooms for optimal intelligibility.

Sound is the most important element of any space. If you can't clearly hear and understand everyone in the conference room or on the phone, nothing is getting accomplished.

Crestron makes it easy to get the best audio experience in every space across the enterprise.

# Enterprise Video Distribution

Crestron DM® is the global gold standard for enterprise AV distribution, offering the highest quality video, fastest switching, multi-channel professional audio, and network-based control and management –all on a secure enterprise-grade platform.

# Room Scheduling

With direct, secure connection to the most popular enterprise calendaring platforms, Crestron makes it simple and convenient to locate and book available meeting spaces from anywhere you are, in the hallway, in the room, or on the app.

 Exchange  Office 365  Suite

## Cloud Provisioning

- 01 Configure one room or every room
- 02 Update firmware
- 03 Manage licenses
- 04 Monitor live status of every device

## Remote Management & Support

Deploy, monitor and manage securely at scale. Maximize uptime. Gather usage metrics.

# AUDIO VISUAL EDUCATION SOLUTIONS

# Education Technology Solutions

## Standardized Solutions on a Single Platform

Only Crestron can deliver the learning technology you need today, while also setting you up to meet the challenges of tomorrow. From hybrid or blended learning and touchless classrooms, to mobile video conferencing systems and advanced room scheduling. Crestron brings it all together with ease on a single, scalable platform.

Everything works together seamlessly to provide simple, consistent, repeatable solutions, from a single building to an entire campus or school district.

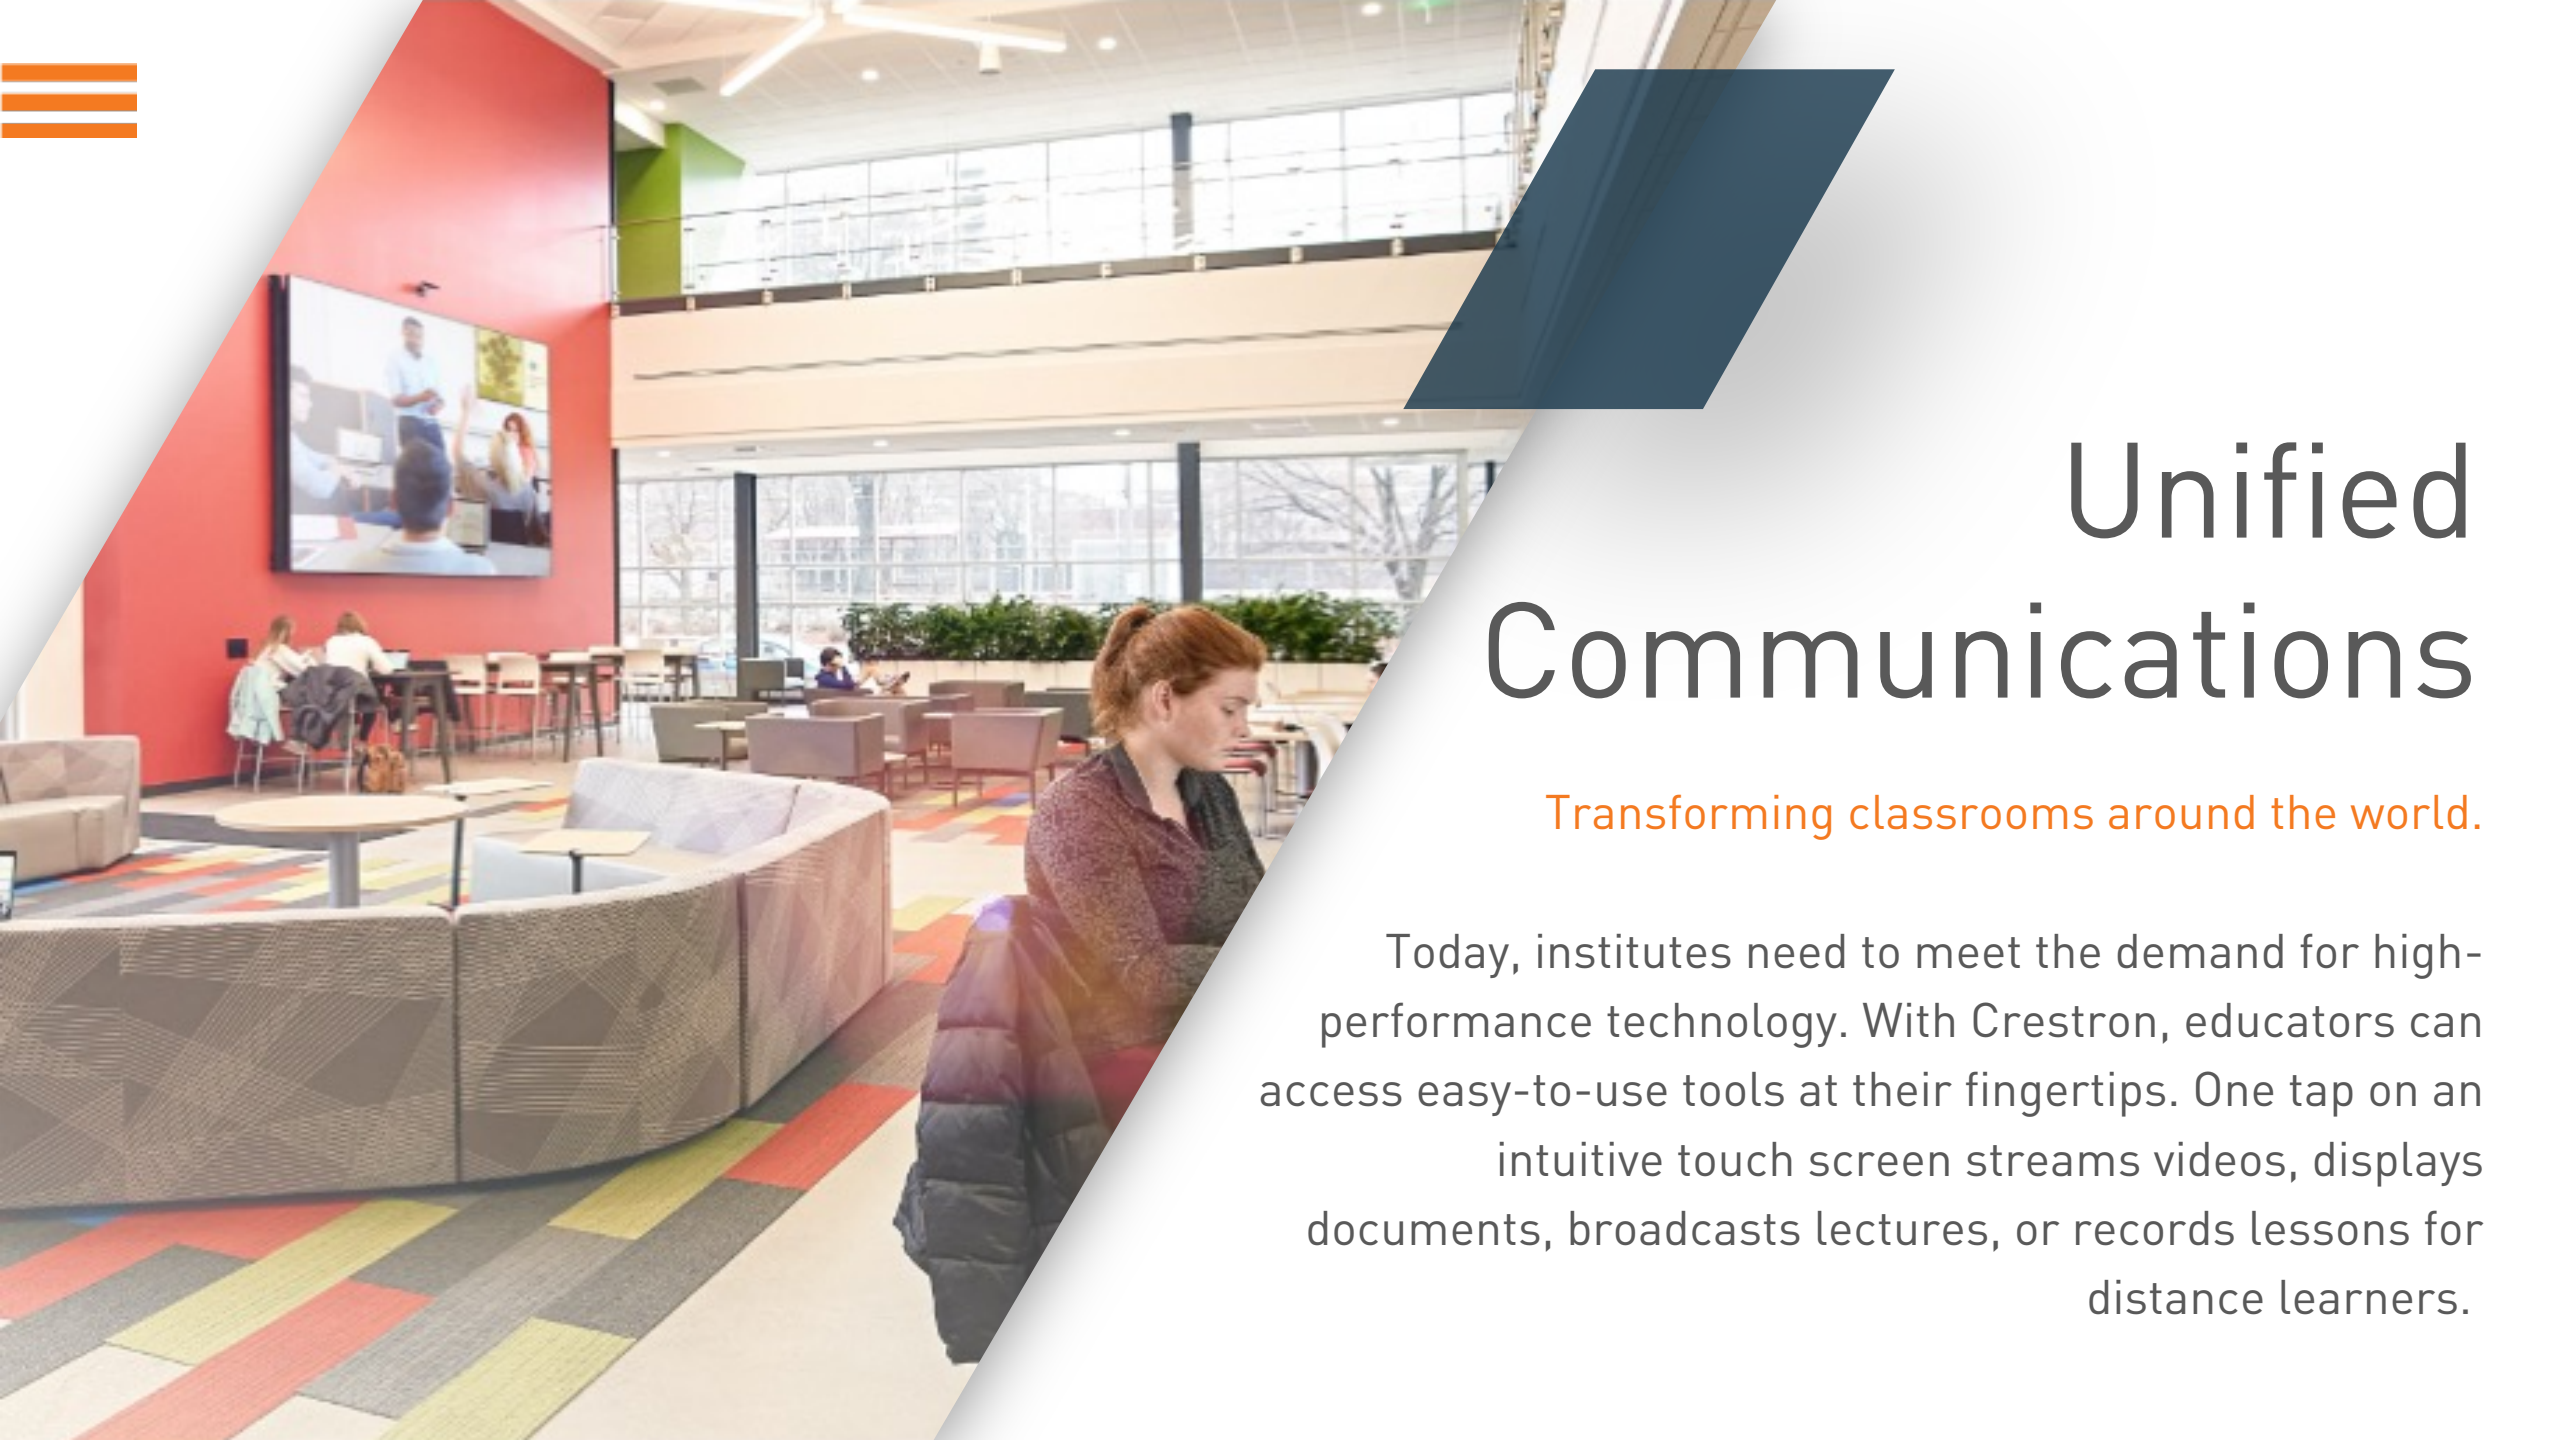

- K-12
- UNIVERSITIES & COLLEGES
- PUBLIC AND PRIVATE
- TEACHING HOSPITALS & SIMULATION LABS

# Audio Visual Technology

Beyond the four walls of a classroom!

Increasingly, academic institutions are developing curriculums for distance learners and remote class experience, to share information in real-time, without regard for geographical distance.

# Unified Communications

Transforming classrooms around the world.

Today, institutes need to meet the demand for high-performance technology. With Crestron, educators can access easy-to-use tools at their fingertips. One tap on an intuitive touch screen streams videos, displays documents, broadcasts lectures, or records lessons for distance learners.

# In Every Learning Space

Crestron has the solutions you need to deliver 21st century instruction everywhere students learn and congregate, faculty teach, groups meet, and athletes compete

# Government Solutions

## Technology You Can Trust

All military branches and a multitude of government agencies worldwide rely on Crestron technology. Crestron's video, audio, Unified Communications, control, and room scheduling solutions enable them to communicate and manage efficiently and securely.

# Wherever You Need It

Crestron solutions can be deployed wherever you need to provide advanced, secure communication and collaboration capabilities.

From meeting rooms, video conference rooms, and classrooms, to command centers and emergency operations centers. From huddle spaces and research labs, to auditoriums and courtrooms. From a single room to an entire building or multi-national organization.

Command Centers

Court Rooms

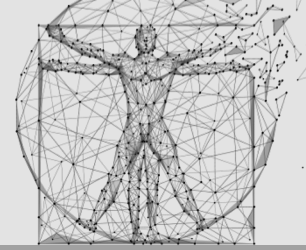

# Secure of Design

Central to our government partners' success is our unwavering commitment to security. A secure system doesn't just happen, of course. It requires a robust process:

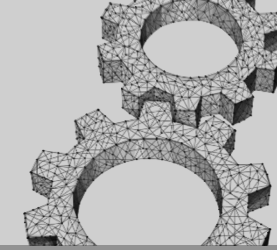

## PRODUCT CONCEPTION

We pinpoint risks that are applicable to the systems and identify assumptions about the operating environment.

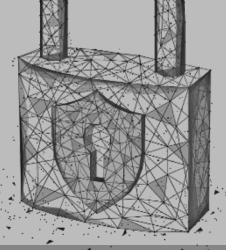

## DESIGN

All source code is reviewed to ensure not only proper functionality, but also conformance to security guidelines.

## MANUFACTURING

Source code is subjected to scans using automated tools that review code for common errors and security holes.

## FINAL TESTING

Rigorous testing takes place once the software/firmware is compiled and loaded into systems to ensure stability. This includes standard network scanning tools to ensure there are no unauthorized ports open.
